

# smart forward.

The Industry 4.0 Solution

**AXOOM**

# AXOOM supports manufacturing companies and machine manufacturers with solutions for Industry 4.0

The AXOOM digital business platform is designed for use along the entire production value chain. The objective is to create seamless connections between machinery, software and processes with users as the key element. Data can be securely transported into the cloud-based platform via vertical connections. AXOOM enables new business models and customized mass production:

- > **AXOOM Smart Enterprise** for manufacturing companies
- > **AXOOM IoT** (Internet of Things) for manufacturers of machines, components and sensors.

Successful teamwork with agile project processes

The young start-up team at AXOOM initially attracted attention primarily by their eye catching corporate design and came to be known at trade fairs as »the people with the yellow shoes.« From modest beginnings, now almost 100 employees are working hard to make AXOOM a leading company internationally in the Industry 4.0 sector. Many awards confirm that AXOOM is on the right path.

Our awards

# We understand production

## Vision for the future

AXOOM was founded in the technology region of Karlsruhe in 2015 and offers digital solutions for machine manufacturers and manufacturing companies. As a subsidiary of TRUMPF and thanks to a strong team of hosting experts, mechatronics specialists, software developers, project engineers, as well as process and lean consultants, AXOOM combines production expertise with IT expertise.

Through additional cooperation with partners with a range of core competencies, customers receive individualized solutions developed by specialists. With this wealth of expertise, AXOOM is able to assist its customers in mastering the mounting complexity of the production industry.

### Our experts

understand the unique challenges presented by production and its processes

## AXOOM offers solutions

Manufacturing companies

### AXOOM Smart Enterprise

- > Value chain optimization
- > Use of machine data along the entire process chain
- > Integration of all systems
- > Intelligent connection via a digital platform

### Both solutions offer

- > Completely modular offering
- > Independent, technology neutral and flexible platform
- > Expertise in smart enterprise processes as well as digital business models
- > Networking of ecosystems
- > Focus on medium-sized companies

Manufacturers of machines, sensors, and components

### AXOOM IoT

- > Networking of machines, sensors and components located around the world
- > Rapid connection of machines
- > Simple, real-time data evaluation
- > Building data expertise

# What our partners and customers are saying about AXOOM

Enthusiasm for our products and services is the best endorsement.

»AXOOM is an important building block here and can be used worldwide for displaying machine statuses.«  
*Dr. Stefan Heizmann, Gühring KG*

»I see great potential for ensuring component quality and preventing machine downtime.«  
*Andreas Egelseder, Felss Holding GmbH*

»AXOOM helps us implement digital networking with our customers.«  
*Leonore Mehwald, kloeckner.i GmbH*

»Conventional thinking patterns and solution approaches are no longer sufficient as we follow the road toward Industry 4.0. We will have to embark on new paths. AXOOM has the potential to become the business platform which makes it possible for us to satisfy our customers' expectations in the future.«  
*Philipp Ismer, M. Knake Blechbearbeitung und Gerätebau GmbH*
